

### CONTEXT

A chemical, biological, radiological, and nuclear (CBRN) event, irrespective of origin, can cause significant loss of life, and affect public health and the environment. The origin of the risk can be intentional, accidental or natural. As such, the management of chemicals and waste is a core element of international CBRN safety and security agendas. Chemical production, use and disposal continue to increase worldwide. Chemical manufacturing and processing activities are steadily expanding and increasing. Accompanying this is a rising risk of human exposure to, and potential harm from, chemical exposures.

Whilst essential to prominent trade sectors (from farming to factory-based manufacture) and everyday life (household products), chemicals and their waste can be high-risk products that have the potential to be harmful to public health and the environment, whether through accidental cause or criminal action.

### OVERALL OBJECTIVE

To address any outstanding chemical safety and security issues in areas of legislation/regulation, prevention, detection, preparedness and response, as well as to enhance the sound management of chemicals and their wastes, taking emerging chemical issues into account.

### SPECIFIC OBJECTIVES

1. Judicial reinforcement with respect to sound management of chemicals and their wastes;
2. Enhanced capacity for prevention of chemical incidents including both safety and security aspects;
3. Enhanced capacity for the region's mobile detection possibilities and chemical testing laboratories;
4. Measures to enhance the region's preparedness and response capacity to chemical incidents;
5. Measures to enhance the region's recovery capacity after a chemical incident.

### ACTIVITIES

1. Sharing of best practices;
2. Chemical risk assessments;
3. Regional train the trainer system;
4. National train the trainer courses;
5. ISO/IEC 17025 training;
6. Awareness raising sessions;
7. Workshops and seminars.

### ACHIEVEMENTS

- National 3-day and 5-day SEACHEM courses in 6 countries;
- National recovery and remediation course in 6 countries;
- National train-the-trainer course in 6 countries;
- National laboratory workshops:
  - Around 1100 delegates trained in 2019;
  - Around 450 delegates trained in 2020;
  - Around 100 legal surveys and other legal documents delivered by VERTIC.
- National responding to chemical incidents workshop in 6 countries;
- National sound management of chemicals seminar in 6 countries.

### AMOUNT

€ 3 million

### IMPLEMENTING PARTNER

Main implementer:  
Sustainable Criminal Justice Solutions  
Group (SCJS)

In partnership with:

- (1) VERTIC,
- (2) UK Health Security Agency UKHSA,
- (3) RIVM,
- (4) ISEMI.

### DURATION

64 months. From August 2017 until  
January 2023.

### COUNTRIES COVERED

South East Asia: Brunei Darussalam,  
Cambodia, Indonesia, Lao PDR,  
Malaysia, Myanmar, Philippines,  
Singapore, Thailand, Vietnam

### CONTACTS

European Commission Service for  
Foreign Policy Instruments (FPI)

FPI 1 – Global Threats
